

```
import React from 'react';  
import { useTranslation } from 'react-i18next';
```

```
function MyComponent() {
```

```
  const { t } = useTranslation('common');
```

```
  return (
```

```
    <div>
```

```
      <p>{t('label_home')}</p>
```

```
    </div>
```

```
  );
```

```
}
```

```
export default MyComponent;
```

Access translations from  
the 'common' namespace

```
// import translation resources
import translationEN from './translation/en.json';
import translationCommonEN from './translation/common/en.json';
```

```
// config the translation resources
```

```
const resources = {
  en: {
    translation: translationEN,
    common: translationCommonEN
  }
};
```

```
// initialize the i18n library
```

```
i18n
```

```
.use(reactI18nextModule)
```

```
.init({
```

```
  resources,
```

```
  lng: "en",
```

```
  // Define the namespaces
```

```
  ns: ["translation", "common"],
```

```
  // Set the default namespace
```

```
  defaultNS: "translation",
```

```
});
```

```
//
```

```
export default i18n;
```

Config translation resources  
under all namespaces

Define all namespaces &  
Set the default one

```
{
```

```
"greeting": "Good Morning, {{name}}!"
```

```
}
```
